

Ave Touch: Sliding front plate customization 44PVTCS3-NAL

SYMBOLS INCLUDE PHONE + COMPUTER SOCKET + POWER + SATELLITE + VACUUM .....

AVE offers a highly aesthetic solution to protect outlets and connectors making them immediately recognizable through illuminable and customizable symbols.

The innovative Ave Touch “sliding” front plates offer the possibility to reproduce specific inscriptions and symbols in the centre of the plates themselves in order to immediately identify the “hidden” outlets and connectors in a highly aesthetic solution.

The customization is made by laser technology. The installer can choose between an extensive catalogue of symbols and – in the case of logos or specific symbols – he can provide himself the graphic element. Optionally, it’s possible to illuminate the symbols: a delicate LED will show the symbol of the socket outlet or connector, making it immediately recognizable even in the dark.

The “sliding” front plates’ range matches the maximum practicality and safety with an exclusive and customizable design. Thanks to an AVE patented system, which allows the plate to literally “slide” on the socket outlets, it’s possible to guarantee greater security for end users. With the same benefits, it’s also possible to cover USB, TV and SAT outlets, or the socket for centralized vacuum systems compatible with AVE System 44.

Perfectly coordinated with Ave Touch commands, the “sliding” front plates are available in seven different versions: in natural or anthracite brushed aluminium and in the glass models in clear black, white and gold, or in frosted silver grey and water green.

The refined design and the wide possibility of customization allow you to insert Ave Touch “sliding” front plates in any environment, like real integrated furnishing items, offering a cutting-edge solution for outlets’ protection.
